

CONVENTION ON INTERNATIONAL TRADE IN ENDANGERED SPECIES
OF WILD FAUNA AND FLORA

Seventeenth meeting of the Plants Committee
Geneva (Switzerland), 15-19 April 2008

REVIEW OF THE USE OF SOURCE CODE 'R'

1. This document has been prepared by the Secretariat.
2. Decision 14.52 directs the Animals and Plants Committees to:
 - a) *review the CITES trade data maintained by the UNEP World Conservation Monitoring Centre [UNEP-WCMC] to determine the species for which source code R has been used for trade, and the countries where this has occurred;*
 - b) *survey countries applying source code R to species other than crocodylians transferred from Appendix I to Appendix II subject to ranching, and obtain information on the management programme for the species to which this source code is applied;*
 - c) *review the literature on wildlife management for current information on management systems that would resemble ranching (i.e. primarily focused on the harvest of specimens representing early life stages for rearing in captivity) and identify common elements in these programmes;*
 - d) *based on this review, propose a definition of ranching and the use of source code R for CITES purposes; and*
 - e) *report at the 15th meeting of the Conference of the Parties on the implementation of this decision.*
3. This Decision derives from a suggestion made by the Animals and Plants Committees themselves in document CoP14 Doc. 38 following unsuccessful attempts, under Decision 13.68, to carry out a wider review of production systems.
4. The term ranching was first used in a CITES context at the third meeting of the Conference of the Parties (New Delhi, 1981), where the Conference adopted Resolution Conf. 3.15 on *Ranching*, which established special criteria for the transfer of populations from Appendix I to Appendix II for ranching purposes. This Resolution was repealed at the 10th meeting of the Conference of the Parties (Harare, 1997) by Resolution Conf. 10.18 on *Ranching and trade in ranched specimens*, which was itself repealed at the 11th meeting (Gigiri, 2000) by Resolution Conf. 11.16 on *Ranching and trade in ranched specimens of species transferred from Appendix I to Appendix II*. This Resolution was amended at the 14th meeting of the Conference of the Parties (The Hague, 2007) and is now Resolution Conf. 11.16 (Rev. CoP14). Ranching has been defined throughout these Resolutions as the 'rearing in a controlled environment of specimens taken from the wild'. From Resolution Conf. 10.18 onwards, the Parties added in the preambular text of the Resolutions that they were aware that ranching of crocodylians on the basis of controlled collection of eggs or hatchlings could be

potentially a valuable and positive conservation tool, whereas taking of wild adult animals needs stricter control.

5. The following crocodylian populations have been transferred from Appendix I to Appendix II following successful ranching proposals:

Population of	Species	CoP number and year of transfer from Appendix I to Appendix II
Argentina	<i>Caiman latirostris</i>	CoP10, 1997
Botswana	<i>Crocodylus niloticus</i>	CoP7, 1989
Cuba	<i>Crocodylus acutus</i>	CoP13, 2004
Ecuador	<i>Melanosuchus niger</i>	CoP9, 1994
Ethiopia	<i>Crocodylus niloticus</i>	CoP8, 1992
Indonesia	<i>Crocodylus porosus</i>	CoP9, 1994
Kenya	<i>Crocodylus niloticus</i>	CoP8, 1992
Madagascar	<i>Crocodylus niloticus</i>	CoP10, 1997
Malawi	<i>Crocodylus niloticus</i>	CoP7, 1989
Mozambique	<i>Crocodylus niloticus</i>	CoP7, 1989
South Africa	<i>Crocodylus niloticus</i>	CoP9, 1994
Uganda	<i>Crocodylus niloticus</i>	CoP10, 1997
Zambia	<i>Crocodylus niloticus</i>	CoP7, 1989
Zimbabwe	<i>Crocodylus niloticus</i>	CoP4, 1983

6. According to Resolution Conf. 12.3 (Rev. CoP14) on *Permits and certificates*, source code 'R' is to be applied to 'Specimens originating in a ranching operation', but the Resolution does not specifically link this to Resolution Conf. 11.16 (Rev. CoP14).
7. At the request of the Secretariat, UNEP-WCMC has provided printouts, derived from CITES annual reports, showing all exports of specimens of species with the source code declared as 'R', for the years 1991-2005. This information is presented in the Annexes to the present document.
8. The trade data provided by UNEP-WCMC show that source code 'R' has been used rather inconsistently by Parties for species other than crocodylians listed in paragraph 5. Repeated use by the same Party, for the same species, for a number of years, is the exception rather than the rule.
9. The Committees are invited to review countries which are using the source code 'R' and identify those doing so on a regular basis for species other than crocodylians transferred from Appendix I to Appendix II subject to ranching. The Secretariat will then seek information from these countries about the management programmes for such species. The Committees are also invited to decide how they will review the literature on wildlife management for current information on management systems that would resemble ranching (i.e. primarily focused on the harvest of specimens representing early life stages for rearing in captivity) and identify common elements in these programmes, so that at their next meetings they can agree a definition of ranching and the use of source code 'R' for CITES purposes which can be reported at the 15th meeting of the Conference of the Parties in compliance with Decision 14.52.

Direct exports of ranched material
