

ALLURA

Allura Biotech Co., Ltd. was established in Taiwan in 2010 and has grown into a company with well-established satellite nurseries nationwide. Over the years, we have succeeded in building trusting relationships with our various partner nurseries in Taiwan, while developing our own Allura™ Phalaenopsis breeds.

As a result we offer an ever increasing collection of Phalaenopsis, Cattleyas, Oncidiums and their intergenerics, Paphiopedilums, Catasetums, Cycnoches and many more.

We concentrate on the worldwide market, meaning our colorful varieties must be suitable to each market, thus ranging from solid colors to multi-colored styles.

We lay a high emphasis on quality, and thus select all the plants individually by hand for export. As a result of our stringent methods in preparing a shipment, our plants are fit for long-term shipments.

Our Allura™ collection will consist of varieties different from those currently found on the market, and have already attracted a lot of attention with their unique beauty. As we look forward to supplying our new varieties, we are excited to offer the outstanding varieties from our partners that you can find throughout this catalogue, in addition to our astounding new Allura™ varieties.

Please enjoy our catalogue, and feel free to contact us with any questions.

Yours sincerely,

A handwritten signature in black ink, appearing to read "Alex", with a long, sweeping flourish extending to the right.

Alex Raymond
General Manager

Tissue Culture Facility

In our tissue culture facility we develop our new Phalaenopsis breeds, as well as primary and standard hybrid mericlones. We lay a high emphasis on maintaining a suitable, clean and protected environment for the propagation of our varieties.

You are free to pre-order varieties from our mother and middle flask lists, which we will then develop into child flasks or even 1.7" and 2.5" plants for you.

Meristem Flask
3-6 months to mother flask

Mother flask
3-4 months to middle flask

Middle flask
3-4 months to child flask

Child Flask
→ ready for shipping

Quality

We lay a high emphasis on the quality of our orchids from strong and healthy roots and leaves to long-lasting thick blooms.

Our team as well as the breeders and growers that we cooperate with follow strict standards for virus and pest control, and thus are all very proud suppliers of orchids with a record low percentage of infected plants.

The plants are checked frequently by our highly skilled breeders, growers and technicians, and mericlones are already tested for viruses in the lab. We only export top quality plants, and check each plant individually by hand before shipping.

We ensure that the plants are well packed and delivered safely through temperature control in transit.

Cattleyas

As with Phalaenopsis, we are very selective for our other genera when preparing a shipment. Our aim for our Cattleyas is also to offer a wide selection of high quality varieties suitable for every market from awarded growers with 3-4 weeks of flowering per time.

We offer our Cattleyas in all sizes, including seedlings, medium size, near blooming size (NBS) and blooming size (BS). We ship our Cattleyas bare-rooted and potted in moss and bark, depending on the import requirements.

Oncidium & Intergenerics

For intergenerics we cooperate with the only two breeders in Taiwan allowing us to offer Odontocidium, Odontoglossum, Wilsonara, Lycastes, Psychopsis and so on. Our oncidiums include the fragrant varieties with small flowers, as well as other varieties. They can also be shipped bare-rooted and potted as seedlings, medium size, near blooming size (NBS) and blooming size (BS).

Other Genera

We also offer Catasetums, Cycnoches and Paphiopedilums. However, these are not included in this catalogue, as the list of varieties is endless. Please feel free to contact us for the catalogues.

Shipping Conditions

Packing

We always make sure the cartons are properly packed for sturdiness. This way the flasks and plants have no chance to move about in transit. We are fortunate to collaborate with growers who pack the orchids for us in a very meticulous and careful manner.

Our plants are packed in boxes of various dimensions according to the pot size, plant size, and transportation method.

CITES

We provide CITES and Phyto documentation with all shipments, as well as all other necessary documentation. You need to check with your country's laws and regulations on importing orchids and secure necessary permit(s) that will need to be forwarded to us well in advance. These normally include a list of phytosanitary import requirements that we must meet for export to your country.

Delivery options

Consignments are shipped either FOB, CIF or CFR. CIF and CFR quotes may be provided upon request and if the destination and approximate order quantity are provided.

If you desire larger quantities, we can arrange vessel container shipment for you to lower the shipping costs.

Safety of Plants in Transit

Our orchids are shipped both by sea and air in optimal conditions providing an ideal environment for the plants in transit.
