in 6" pot Stewarts, in 6" or 7" pot
\$60
in 7" pot

Blc. Nosegay 'Jo-Jo'

\$50

Stewart's breeding, 1968, large pink similar to Pamela Hetherington but a bit more pink, large 6 bulb, bare root division

**Lc. Paradisio
'Colossal' HCC/AOS**

\$350

Famous stud plant used as a parent in Pamela Hetherington and Nosegay, used by many of the great breeders of the past such as Armacost, Stewarts, McLellan, R. Gore, Jones & Scully, Sea God Nursery and many others. Very rare. This came out of the Stewart's stud house, given to my friend, R.E. Post and passed on to me. Despite testing positive for virus, it grows vigorously and blooms cleanly with no outward symptoms. Rare offering that few collectors will ever own, 5 bulb bareroot division

**Blc. Carolina Golden
D'Or 'Spring Time'**

\$100

Lenette's stud plant, awardable, gorgeous art-shade orange, first division of this to be released, 4 bulb division

**C. percivaliana
'Summit' FCC/AOS**
(photo courtesy of Woolf
Orchid Culture)

\$40 5" pot, 12 bulbs

C. percivaliana 'Gene Crocker'

\$50

7 growths
in 5" pot
\$60
10 growths
in 5" pot

From the selfing of the 4N plant of 'Mendenhall-Summit', has better shape than either parent, 5" pot with 10 growths or 5" pot with 7 growths

C. walkeriana semi-alba 'Tokyo #1' AM/AOS

\$100

From Suwada in Japan, 5.5" pot, 6 bulbs with leaves, 2 leafless that bloomed

C. walkeriana coerulea 'Monte Azul' AM/AOS, JC/AOS

\$40

4 bulb bare
root
division
\$50
5 bulb bare
root
division

Awarded plant from Ervin Granier, 4 or 5 bulb bare root divisions from my large plant

C. walkeriana alba 'Sierra Storm' AM/AOS

\$100

Gold Country, from original awarded plant. I waited for many years to get a division of this. This clone requires very good light to bloom well. 5" pot with 5 bulbs with leaves plus new growth.

C. walkeriana 'The Chairman' AM/AOS

\$250

Division of the awarded plant from Fred Missbach, originally from Suwada Orchids, Japan, came to the US via Cal-Orchid. Established in 5" pot, 4 growths with leaves, 2 old bloom growths.

C. walkeriana
'Welcome Back'

\$150

This came to me from Gold Country as a small unbloomed seedling. It was one of only a few plants that survived my greenhouse burn up in 2002 and was the first survivor that bloomed for me afterwards. Blooms were so good that it seemed to welcome me back (thus the name) to orchids again after nearly giving up. I feel it can be awarded on a good blooming, best color of any walkeriana I own, even better than 'The Chairman'. 7 bulb bare root division with two leads, great roots.

Pot. Carolina Golden
Nugget '#1'

\$100

Lenette stud plant, one of the most beautiful, intense orange with red lip orchids I have ever seen, only one division has ever been released. Awardable. Bare root 4 bulb division.

C. intermedia alba
'Breckinridge Snow'
(Breckinridge Snow on left)

\$75

Breckinridge Orchids originally a collected plant that Mark Rose acquired back in the 1960's, a true intermedia alba unlike several awarded hybrids that are mislabeled as intermedia breeds white, 4 bulb bare root division of original plant.

C. intermedia alba
'Virgin Snow' (Virgin
Snow on right)

\$250

4N mutation of 'Breckinridge Snow' mericlone, see photo for comparison of 2N 'Breckinridge Snow' on left and 4N 'Virgin Snow' on right, exactly like 'Breckinridge Snow' but significantly larger in every dimension. 4 bulb bare root division, first time ever offered.

C. loddigesii 'Shorty'

\$40

Cal-Orchid, one parent of the recent FCC/CCE plant of loddigesii 'Mai Short Sweetheart', compact grower, shell pink blooms, makes a nice specimen, 4" pot.

C. Ioddigesii 'Tony Bos'

\$50

Jones & Scully, named for a long-time employee at J&S (pictured on p.3 of their 1987 catalog), similar to 'Carina', but to me is better. 5" pot.

C. Ioddigesii 'Carina'
AM/AOS (89 points)

\$50

4 bulb bare
root

division

\$60

5 bulb bare
root
division

Jones & Scully, 4 or 5 bulb bare root divisions

C. Ioddigesii 'April's Pride'

\$35

This was April's (my daughter) favorite that we bloomed from a seedling batch of 'Shorty' X 'Sweetheart'. It is very flat and blooms are large for the species. Somebody will get this awarded. Two established plants in 5" pots.

C. Ioddigesii 'Aranda'
AM/AOS

(photo courtesy of
Whippoorwill Orchids)

\$40

Similar to 'Carina' but plant is shorter, 5" pot.

C. Ioddigesii 'Dixie Land Blues' AM/AOS

(first image shows flower
form, second image shows
vigor)

\$500

Very rare 4N mutation from 'Blue Sky' selfing that was treated to increase ploidy. My plant, awarded with 85 points as a first bloom seedling. I think it has FCC potential. Small back division, established with a nice new growth. Can provide a photo of the division in pot. Vigorous grower unlike many 4N plants. This could be a valuable stud plant as well as a unique collector's treasure. Never before offered. \$500 firm.

C. Iodigesi 'Dixie Land Blues' AM/AOS

(first image shows flower form, second image shows vigor)

\$500

Very rare 4N mutation from 'Blue Sky' selfing that was treated to increase ploidy. My plant, awarded as a first bloom seedling. I think it has FCC potential. Small back division, established with a nice new growth. Can provide a photo of the division in pot. Vigorous grower unlike many 4N plants. This could be a valuable stud plant as well as a unique collector's treasure. Never before offered. \$500 firm.

Bc. Orange Show 'Cloud Forest'

\$40

Miyamoto breeding, appropriate name as it puts on a real show, brilliant concolor orange. Fresh citrus fragrance. Fairly compact grower, 4 bulb bare root division.

Lc. Prism Palette 'The Clown' HCC/AOS

\$45

Stewarts, Mrs. K. Francis breeding, very similar to 'Mischief' in the photo. Intense candy-like fragrance. Bare root, 5 bulb division.

Pot. Mem. Mario Lanza 'Golden Eyes' AM/AOS

\$100

Lenette seedling, division I shared was awarded in Atlanta. Only two divisions ever released. Rare clone of this grex that blooms more than one time per year and the only one of the cross that came out this color with this shape and form. Courtney can tell you how good this is, 6 bulb bare root division.

Bc. Ranger Six 'A-OK' FCC/AOS

(photo courtesy of William Merritt Collection)

\$100

Armacost, this plant came from Helen Congleton in CA and she told me she got it from Ernest Hetherington, original division of awarded plant, 5 bulb bare root division.

**Lc. Egerland
'Blushape' AM/AOS**

\$250

My awarded plant from 2005, remake of the cross from Jerry Rehfield in CA, Robert Fuchs was on the judging team and he said it was the best "blue" large flowered cattleya he had ever seen. 5" established division of awarded plant, 8 growths.

**C. Dubiosa
'Perfection' AM/AOS**

\$40

Jones & Scully, 4 bulb bare root division.

**Blc. Kure Beach
'Lenette #2' FCC/AOS**

\$75

Very recent FCC award in Tennessee. Just checked clean for virus. Sometimes blooms with the flares as in my photo, but can be concolor yellow as well. Excellent stud parent and blooms more than one time per year, 4 bulb bare root division.

**Bc. Deecasso 'Pink
Perfection'**

\$45

Stewarts, beautiful, fragrant pink, 4 bulb bare root division.

B. digbyana 'B-52'

\$50

Originally this was a seedling from Oak Hill Nursery about 1980. I have bloomed it larger than any awarded digbyana and it almost always blooms with 2 flowers on each growth if given plenty of light. Check the photo, 8 blooms on 4 spikes. Never shown for award as of yet. Various established divisions.

**Blc. George King
'Mem. Jim Nivens'
HCC/AOS**

\$100

Award plant was shown by Mr. George King, 1979. This is an original of the awarded plant shared with Frank Fordyce from Mr. King, then to me. Has more color than the 'Serendipity' clone and just as good of shape, 6.5" pot, established.

**Pot. Goldernell
'Southern Cross'
AM/AOS**

\$75

This clone is out of Australia, but was awarded in the US. Gorgeous art-shade well displayed on strong stems. 6" pot established.

**Blc. Distant Shores
'New Worlds'**

\$45

Stewarts, nice semialba, 4 bulb bare root division.

**Lc. Magic Bell 'New
Trick' HCC/AOS**

\$60

Armacost, 1984, Trick or Treat hybrid, orange flares on segments with silver/pink, large heads of blooms on tall spikes. I honestly think this clone is better than the 88 point AM clone called 'Maria Irma'. If you put in Spring shows, this will knock your socks off! 4 bulb bare root division.

**Bc Mount Anderson
'Louvre' AM/AOS**

\$75

Beall breeding, 1962. Jones & Scully award in 1973. This cultivar holds up very well by today's standards 50 years after being awarded. 5" established, blooming size.

L. tenebrosa 'Taylor Bronze' AM/AOS, CCM/AOS

\$75

From Taylor Orchids, division of original awarded plant from Ron Ciesinski, owner. One of the finest examples of the dark variety of the species. MUCH more vigorous than the 'Rainforest' clone. 4" pot, established, new growth with sheath.

Blc. Mahina Yahiro 'Uii' AM/AOS
(photo courtesy of Isabelle Lindroos)

\$40

Hawaiian breeding, large impressive pink with very ruffled lip. Established in 6" pot.

Lc. Cariad's Mini-Quinee 'Blue Reflections'

\$40

(C. Mini Purple x C. intermedia), coerulea forms were used here. Light blue segments and darker blue lip, heavy substance. 4 bulb front lead division, bare root.

C. Hybrida 'Hackneau' AM/AOS

\$100

Back bulbs were shared to me from Courtney Hackney which I grew into the awarded plant, small but well established divisions. This clone will grow rapidly and is very vigorous, beautiful bi-foliolate. I believe that only Courtney, myself and one other person have this.

Lc. Tropic Charm 'Social Flare'

\$40

From a flask out of Hawaii, the only one that came out flared, very good shape, compact, fragrant and long lasting, award quality.. Established in 5" pot with 7 growths.

**Slc. Dixie Jewels
'Suzuki' FCC/AOS**
(photo courtesy of Alan Bachrach)

\$75

Bred by Frank Fordyce while he worked at Rod McLellan Co., came to me from Helen Congleton who got it from Frank. Compact, very intense red blooms around Valentine's Day. Not often available anymore, Established in 5" pots with 10+ growths.

**Blc. Nacouchee
'Mission Valley'
AM/AOS**
(photo courtesy of Lynn O'Shaughnessy)

\$100

Armacost, 1952, great pink and superb stud plant used to make some of the best pinks and lavenders that exist. One of the parents of Sylvia Fry and Ranger Six. Established plant in 6" pot with 6 growths.

B. nodosa 'Brecko-Nova'

\$100

From Breckinridge Orchids, Mark Rose selfed the 'Susan Fuchs' FCC clone, then treated the plants to induce higher ploidy. This clone was superior to any of the others. Flower stems are at least twice as long as the normal species and stand more upright, blooms are larger and flower segments are stiffer and don't sag like the parent. This is the most unique nodosa I have ever seen. Only one other person has this for security. Established in 5" pot for 2 years.

**Lc. Lew Sykora
'Ceylon Ivory' AM/AOS**

\$60

4 bulb bare
root
division

\$75

5 bulb bare
root
division

with 2 leads

Field's breeding, 1951, awarded in 1957. A true classic semi-alba that stands up to the test of time. Great stems carry up to 4 blooms without staking. Vigorous grower making several leads per year once it gets going. Blooms February to March. Rarely seen in collections. One 4 bulb and one 5 bulb division with 2 leads.

**Schomburgkia
sawyeri**
(first picture shows flower,
second picture shows plant)

\$150

According to the taxonomists, the genus Schomburgkia does not exist anymore, but until they quit changing things around constantly, I will leave well enough alone. This rare species is described by Dr. Carl Withner in Volume III of his THE CATTLEYAS AND THEIR RELATIVES on page 41 and there is a photo on plate 21 in the same volume. I have included 2 photos of my own as well. There is debate by various hardcore enthusiasts as to its validity as a true species. To my knowledge no one has proven anything other than it is a species.

**Schomburgkia
sawyeri**

(first picture shows flower,
second picture shows plant)

\$150

It is found in nature on the Pacific slopes in Mexico. I absolutely LOVE this thing. I have two large bulbs over the pot with roots extending down into a 6" pot that is attached below the division. If sold, I will simply cut off the two bulbs and they will already have established roots in a pot. The front bulb has 3 leaves and is the largest on the plant with a beautiful spike to flower later in the summer. If serious, I will take a photo of the division for you. Only the one division available; a second one is already spoken for.

**Blc. Mem. Crispin
Rosales 'Troubadour'**

\$300

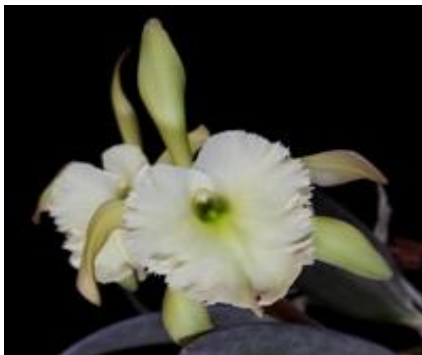

Bracey, 1959 from Stewart's stud plant collection. This plant came to me from Mr. R.E. Post's collection, who was given it from the stud house by Ernest Hetherington to keep it for "insurance" in case something happened to their plant. The story that I heard from a former employee at Stewarts was this clone was closely held for breeding because of the color, more of a reddish tint to it over the other clones in the stud house, even the leaves have a purple pigment, and it is a more compact grower than other clones. It is a "standard" cattleya, but compared to others, the bulbs are more squat and the leaves are not as long. The thinking was that the more saturated pigment could lead to darker progeny when used in breeding. It does not quite have the shape of 'Behold' or 'Shining Moment', but it is probably the rarest clone that is known to have survived from Stewart's stud house. An impressive bloom. Other than R.E.'s plant, only one known division was released to a grower on the west coast and that plant, according to the owner, has perished. I have one 6.5" pot, 10 large growths with two leads that is ready to be bumped up to an 8" pot.

**Blc. Carolina Golden
D'Or 'Lenette #5'**

\$250

Stud plant from Lenette. There are no adequate words to describe how beautiful these blooms are, even the photo does not do it full justice. For those who knew of Lenette's breeding, they excelled at breeding for art-shades, oranges and reds. Even years after they have gone out of business, I have not seen better oranges than what they produced. This clone is one the best and has a reddish undertone that makes it more vibrant than just plain orange. The blooms can get up to 4", spikes are strong and can carry up to 6 blooms each. The plant makes multiple growths per year that all flower about the same time for a long lasting show. I will cut a strong 5 bulb division with 2 leads from the original stud plant.

B. Aristocrat 'Snowy Owl'

\$35

Stewarts, nice example of the two species combined (B. glauca X B. digbyana). 4 bulb or better divisions.

Blc. Rio's Green Magic

\$30

From Jones and Scully but bred by Ruben in Orchids (B. digbyana x Blc. Green-heart). Stays green and is very fragrant at night, looks similar to a large digbyana. 4 bulb or better divisions, bare root.

B. Fairy Queen 'Archie Lee' HCC/AOS

\$125

This was an unbloomed seedling (B. Jimminey Cricket x B. glauca) from Woodland Orchids in Charlotte, NC. The AOS misspelled the clonal name, it should be Archie Lee for the father of Lee who was the grower at Lenette Greenhouses. The blooms are large, approaching 6" or better, very delicate color combination, nice stems, first release of my awarded plant, 4 bulb bareroot divisions.

Blc. Carolina Golden D'Or 'Lenette #2' AM/AOS, CCE/AOS

\$45

A real show stopper from Lenette. I will cut a strong division if interested.

Lc. Lemon-Lime 'Lenette'

\$20

Bred by Lenette (C. bicolor x L. crispata), a darling novelty cross that looks like a miniature lemon-lime bicolor, too cute! The color just glows. Clusters of elegant blooms on tall stems way above the foliage. I have one tray of mericlones of a selected clone that I have been waiting for one to bloom before offering them., and now one is, see the photo. Dug-ups from tray, near blooming size.

Lc. Platinum Sun 'O-1' AM/AOS

\$60

Fordyce, one of the few large flowered cattleyas that Frank bred, but what a beauty. Great stems to display the "rainbow" flowers. 6 bulb, bare root division available with two leads.

Dear Friends,

If you are looking for mass produced, cheap, fluffy orchids from Taiwan, then you have come to the wrong place. This list of rare heirloom and unique clones includes established plants and those that I can get a bare root division from. Each is noted as such. For most plants, there is only one available, but inquire just in case. Most plants will have a photo taken by me. I will be glad to provide a photo of the actual division you are interested in.

I will take orders by email and confirm orders by the date/time that the email was received. I will mainly be bringing pre-ordered plants to the St. Augustine Orchid Society Meeting on May 7 since my van is limited for space. I accept payment by cash, US Postal Money Order, and personal check. I do not have the ability to accept credit cards or Pay Pal.
